

Unitouch V1 Website Architecture & Claude Code Build Plan

Project Vision

Build a premium luxury NFC business card platform focused on converting visitors into card buyers. No customer login. Admin-only management. Dark premium aesthetic inspired by Apple, Linear, luxury fintech and the provided references.

Tech Stack

Frontend: Next.js 15, TypeScript, Tailwind CSS, GSAP, Framer Motion (limited use), React Three Fiber for hero card. Backend: Supabase. Payments: Razorpay. Hosting: Vercel. Version Control: GitHub.

Core V1 Scope

Landing page, product showcase, order flow, Razorpay checkout, profile creation form, admin panel, public profile pages, analytics collection, NFC URL workflow.

Design System

Dark luxury theme. Space Grotesk headings. Inter body text. Near-black background. White typography. Accent pastel green and pastel purple used sparingly. Strong focus on spacing, lighting, reflections, and premium motion.

Hero Architecture

Light beam from top center, floating 3D Unitouch card (GLB model preferred), subtle parallax, premium reflections, GSAP scroll interactions. Avoid crypto-dashboard styling despite visual references.

Database Tables

profiles, orders, admins, analytics_events. Profiles store contact data and public links. Orders store shipping and payment data. Analytics stores page views and interactions.

Profile Page

URL format: unitouch.in/u/{username}. Includes photo, name, designation, company, contact actions, social links, website, optional portfolio, optional YouTube, vCard download.

Admin Panel

Three admins. Supabase email/password auth. Create profile, edit profile, publish profile, manage orders, analytics overview.

Order Flow

Customer selects card, fills shipping + profile information, pays via Razorpay, order stored in database, admin reviews, profile published, NFC programmed, card shipped.

Analytics

Track page views, WhatsApp clicks, website clicks, contact saves, social link clicks. Hidden from customers in V1.

Phase 1

Project setup, Supabase schema, theme system, environment variables, deployment pipeline.

Phase 2

Navbar, hero section, light beam system, 3D card showcase, premium animations.

Phase 3

Features section, benefits, NFC demonstrations, social proof.

Phase 4

Order form, profile form, validation, database integration.

Phase 5

Razorpay integration, payment verification, webhooks.

Phase 6

Public profile page generation and routing.

Phase 7

Admin dashboard and profile management tools.

Phase 8

Animation polish, motion tuning, premium interactions.

Phase 9

SEO, accessibility, performance optimization, mobile responsiveness.

Claude Code Instructions

Build strictly phase-by-phase. Do not generate entire application at once. Complete each phase, test, commit to GitHub, then continue. Prioritize visual quality over feature quantity. Follow references for lighting, spacing and premium feel.

Master Claude Prompt

Use the attached architecture document as the source of truth. Build the Unitouch V1 website phase-by-phase. Do not skip phases. Maintain premium Apple/Linear-level quality. Use Space Grotesk and Inter. Use dark luxury styling, subtle pastel green/purple accents, GSAP-driven motion, and a hero section featuring a premium floating NFC card with a top light beam. Avoid generic SaaS templates, crypto dashboard styling, and excessive glassmorphism. Focus on craftsmanship, spacing, lighting, performance, and mobile responsiveness.
